SEGNANT EXPERIENCE & DEVELOPMENT QUALIFICATIONS

Segnant Technologies was formed in 2002 to address a growing need in web development. More and more medium and small businesses were in need of deploying revenue generating websites but were unable to afford the kind of websites that their businesses needed.

At Segnant, we specialize in providing low cost solutions to custom software projects. We combine intelligent code that understands your business with a user interface that is elegant and easy to navigate. We strive to provide these solutions without charging high fees.

We focus on helping your company reduce IT costs without reducing the quality of your IT products. We believe in getting it done quickly and correctly the first time. Our strength in internet applications development helps us in delivering highly customized solutions for our clients. We specialize in creating highly usable, scalable, robust technologies for any industry.

In addition to creating successful technology, we place great value in customer service and client engagement. By working with each client and encouraging their interaction, our developers gain insight to create a final product that is consistently better than what the client envisioned. We enjoy our ongoing relationships with our clients and also have extensive experience in the maintenance and enhancement of existing client products. We are dedicated to our customers.

Segnant Technologies has a varied and extensive client list that stretches across various industries and time zones. We have created hundreds of web applications, portals, back-end applications and desktop applications in its five year history. These were not cookie cutter solutions; each was a custom designed solution specific to each individual client's needs. We welcome you to browse our online portfolio for specific examples of our work at www.segnant.com.

With each client project, Segnant creates a unique solution that allows our clients to become industry leaders through a custom web-based business process improvement solution.

Segnant employs an extensive team of Engineers, Software Developers and Designers with impressive education and experience. Our average Developer has a Masters Degree in Computer Science and a minimum of five years of professional work experience. Our average Designer has five years of Design experience and has worked on at least 50 web applications prior to working for Segnant.

Segnant is proud to be a Microsoft® Certified Partner (ID number 1925791). Microsoft® Certified Partners are independent companies that can provide you with the highest levels of technical expertise, strategic thinking, and hands-on skills. Microsoft Certified Partners encompass a broad range of expertise and vendor affiliations and their real world perspective can help you prioritize and effectively deliver your technology solutions.
